DISCLAIMER: ALL REGION FILES. Now you can install AP100US on your computer. After installation, continue with step two below. This document contains information on how to use the software and help you configure settings. The software's version numbers are listed in the upper right-hand corner of the Control window. Amada announces the release of the new software version AP100US1. You can download and use the free software that you need to complete your project. Linux. Mac. Windows. Download Free AP100US1 Software. Using the Software. This section provides you with quick. Install the Sentinel Driver on your Windows PC. Select the option to Open the file. . Please refer to the user manual for information on how to use AP100US software. Pre-installation of AP100US Software. Restart your computer and connect.Q: ArangoDB - finding the cursor with a specific prefix I have an ArangoDB collection which is denormalized. I have a query for a specific property: a.b But because the query returns all the elements, I can't access them with a cursor. I tried to add an if (IsCollection) condition but it says that values doesn't exist. Is there any way to achieve that, without modifying the data? A: In general, the best way to solve such a problem is to create a view that returns the results you want. In this case, you can create a view that returns all documents with b in all a documents. For example, the following view is always sorted by a.b: FOR w IN V RETURN w For the view to work, create an index on b for a. For example: FOR w IN V CREATE INDEX ON w USING b Here's a working MongoDB document that creates a view: > db.people.createIndex({b: 1}) > db.people.find() { "_id" : ObjectId("5b4de2f5a014a1ce4d25ef63"), "b" : "foo", "name" : "Zee, Foo" } { "_id" : ObjectId("5b4de2f5a014a1ce4d25ef64"), "b" : "bar", "name" : "Goo, Bar" } { "_id f678ea9f9e
